SYMPOSIUM

**06.12. & 07.12.2019**

User Meeting, Orthocaps Center, Hamm

# Dear colleagues,

The 5th Orthocaps Symposium will be held this time at the newly constructed Orthocaps production facility in Hamm. A number of new developments and features will be presented in an informal atmosphere together with open discussions to share different points of view, amongst participants, on how best to offer quality invisible orthodontic treatment to patients. The main topics of discussion will be:

- The Hybrid Aligner Treatment modalities
- The advantages of planning treatment using different types of polymers and thicknesses
- Combining a Herbst type of appliance with aligners (The Orthocaps Rainmaker)
- The importance of early treatment with a customised functional regulator (The Orthocaps BiteGym)
- Treatment planning features in the new iSetup version 4, including the 3D Face and x-ray superimpositions
- Evaluation of Treatment Progress Reports to ensure excellent clinical results
- Using IPR to obtain clinically stable and aesthetically superior results
- Patient Communication Techniques to outline the importance of receiving professionally supervised orthodontic care

In a new format, that will make the meeting more productive and interesting, we will have a number of highly qualified colleagues, both from the academic as well as the clinical world, to moderate and lead these topic discussions. This interactive manner will enable group participation and exchange of ideas from all sides.

I hope that you will find time in your busy schedules, to participate and allow us to learn from the wealth of your knowledge and experience.

I very much look forward to seeing you all in Hamm.

Thank you!

Wajeeh Khan
